SUMMARY

Experienced AI/ML Engineer and Data Scientist with hands-on industry experience building enterprise-grade AI systems at Simplify Consulting Indonesia. Specializes in autonomous AI agents, Generative AI, RAG/CRAG pipelines, NLP, and Computer Vision. Proven results include developing an end-to-end AI test automation pipeline from the ground up, reducing LLM hallucinations by 59%, delivering instant 90.5%-accuracy medical predictions, and enabling 90%+ agricultural decision models. Recognized globally through Microsoft Imagine Cup 2024 and APICTA for delivering innovative and production ready AI solutions.

EDUCATION

UNIVERSITAS KOMPUTER INDONESIA

Bachelor of Computer Science

Cumulative GPA 3.72 /4.0; Awarded Rector's Scholarship from 3rd semester;

Bandung, ID

Nov 2025

EXPERIENCE

SIMPLIFY CONSULTING INDONESIA

AI Engineer – Contract

Bandung, ID

Dec 2025 – Present

- Developed an autonomous Debugging Agent for Simplify Transformer an AI-driven, multi-language code migration platform automating error diagnosis from test/build outputs and applying targeted code fixes, reducing manual debugging cycles across migration pipelines.
- Built the AI-powered Test Planning module for Simplify Studio, an SDLC automation system; auto-generated structured Excel-based test plans directly from project documentation, reducing the need for manual test case authoring.
- Engineered the multi-source RAG Retrieval pipeline for Simplify Studio, integrating context from heterogeneous document sources to power accurate, context-aware AI generation across documentation, code, and testing workflows.
- Developed Simplify Testing from the ground up, an end-to-end AI testing automation platform that transforms requirements into executable Katalon automation scripts; reduced manual test script authoring effort by over 80% and shortened test preparation cycles from days to hours.
- Collaborated with cross-functional AI and software engineering teams to deliver enterprise-grade Generative AI products and multiple scalable AI Proof-of-Concepts (PoCs), validating applications of Agentic AI, RAG, software modernization, SDLC automation, and intelligent testing workflows for enterprise use cases.

BANGKIT ACADEMY

Machine Learning cohort – Student Activity

Bandung, ID

Feb 2024 – Jul 2024

- Specialized in Machine Learning, with in-depth training on supervised/unsupervised learning, TensorFlow, model deployment, and ML infrastructure.

- Completed over 900 hours of multidisciplinary learning combining technical training, soft skills, and English fluency.

Contributed to a capstone project developing a user-to-user book bartering platform, where I designed and implemented a content-based recommendation model using user reading preferences.

UNIKOM CODELABS

Minister of Operational and Data Science - Student Activity

Bandung, ID

Mar 2022 – Oct 2025

- Practiced and applied data science in real-world contexts through internal projects
- Participated in national and international-level competitions, representing UNIKOM and Codelabs.
- Awarded a scholarship from the Rector for contributing to the development of internal software systems for UNIKOM and Codelabs.
- Gained practical experience in overseeing, managing, and optimizing organizational operations for a 42 member.
- Enhanced teamwork and collaboration skills through cross-functional coordination and peer leadership.

UIN SUNAN GUNUNG DJATI BANDUNG

Web Developer - Internship

Bandung, ID

Oct 2020 – Dec 2020

- Developed a web-based data collection system for alumni of the Faculty of Da'wah & Communication.
- Implemented the system using CodeIgniter and Bootstrap, ensuring responsiveness and user-friendly interface.
- Contributed to improving alumni data management and accessibility for institutional reporting.
- Gained practical experience in backend and frontend web development in an academic environment.
- Collaborated with faculty staff to define requirements and deliver functional features aligned with user needs.

SELECTED PROJECTS

AGRIMATE - MOBILE APP

Jul 2023

- Developed and integrated multiple AI models to support farmers in agricultural decision-making.
- Built a market price prediction model using Multiple Linear Regression with 90.2% accuracy, helping farmers sell their harvest at a more proper price.
- Developed CNN models for planting recommendations (92.8% accuracy) using soil-type images combined with IoT-based environmental data, and crop disease detection (91.1% accuracy) using plant disease images, while enhancing the system with an LLM to deliver contextual explanations and adaptive, farmer-focused recommendations.
- Awarded as the finalist at APICTA Hong Kong 2023 , Top 20 Semifinalist - International Microsoft Imagine Cup 2024
- Utilized : **Python, TensorFlow, Microsoft Azure**

SOCIALABS – WEB APP

Jan 2024

- Building an intelligent chatbot powered by Corrective Retrieval-Augmented Generation (CRAG) to deliver topic-specific insights from social media.
- Processed 10,000+ social-media text data points end-to-end from data collection, preprocessing, vector search, to model evaluation.
- Developed a multi-agent verification system to automatically detect hallucinations and inform users about the specific types of hallucinations present in each response.
- Successfully reduced hallucination rate from 73% to 30%, significantly minimizing misinformation delivered to users.
- Designed and developed the entire chatbot system by building the backend API, integrating CRAG, and implementing multi-agent evaluation into a unified web application.
- Awarded as Finalist at APICTA 2024
- Utilized: **Python, Microsoft Azure, MongoDB, Langchain, Langgraph, Flask**

PEAKY BLINDER – MOBILE APP

Jun 2023

- Developed a diabetic-retinopathy detection model using Azure Custom Vision trained on fundus eye images, achieving 90.5% accuracy for early-stage screening and cutting diagnosis wait time from 7–10 days to instant results..
- Building an intelligent chatbot system that utilizes Retrieval-Augmented Generation (RAG) to answer user questions and provide health insights, particularly regarding diabetic retinopathy.
- Combined medical image analysis with conversational AI to provide a faster, more accessible, and low-cost screening workflow, reducing conventional examination costs by up to 50%.
- Achieved 1st runner-up and Audience Award at COMPFEST 15, and became a finalist at GEMASTIK 17.
- Utilized: **Python, Tensorflow, MongoDB, Langchain, Microsoft Azure**

SKILLS

- Programming Languages: Python, SQL
- Machine Learning / Data Science: Tableau, Scikit-learn, Pandas, Numpy, Matplotlib, Seaborn, Statistical Analysis
- Deep Learning: TensorFlow, Keras, PyTorch, Computer Vision (CNN), NLP, Time Series, Generative AI (Langchain, Langgraph)
- MLOps & Tools: Flask, Git/Github, Microsoft Azure, AWS, Docker
- Databases: SQL-based databases (MySQL, PostgreSQL) and NoSQL (MongoDB Vector Database, Milvus, Qdrant)

CERTIFICATIONS

- | | |
|--|------|
| • AWS Certified AI Practitioner | 2026 |
| • AI+ Foundation™, AI CERTs™ | 2025 |
| • Associate Data Scientist, BNSP Indonesia | 2025 |
| • Specializing in Machine Learning, Bangkit Academy led by Google, Tokopedia, Gojek, & Traveloka | 2024 |
| • More on Certificate Bank | |

ACHIEVEMENTS

- | | |
|--|------|
| • Top 20 Semifinalist - International Microsoft Imagine Cup | 2024 |
| • APICTA Hong Kong 2023 Merit Awards (Finalist) - Tertiary Student Project | 2023 |
| • Received Funding Approval – PKM Belmawa | 2024 |
